Preview area30 2025

Let's inspire: fascinating newcomers at Naber

From 20 to 25 September, Naber will be discussing its kitchen accessories innovations with international industry experts at the area30. At the spacious G 21 trade fair stand, new items with product designs that impress on many levels will take centre stage. They are strikingly beautiful, functional and durable. The Naber team is looking forward to welcoming an interested, expert trade fair audience!

Naber's latest innovations focus on sinks and faucets, connected smart lighting, support elements and interior design. Spectacular highlight: a new sink series is set to make its debut, whose fascinating design has been realised in the material classes ceramic, stainless steel and composite materials, each available for surface-mounted, flush-mounted and substructure installation. Flowing rounded surface transitions combined with narrow side radii, are the defining features of the built-in sink developed in cooperation with Hans Winkler Design, Grafenau.

Eight further newcomers are joining the NABER-CONTURA® range of extremely durable composite sinks. This material can withstand anything: frequent exposure to boiling water from special taps, for example, or acidic and colour-intensive foods. The shapely new models, with or without a drainer and with or without a second bowl, impress with their silky feel and lasting colour brilliance. Their four new contemporary colours, which suit almost all interior styles, are sure to cause a stir: marbled white, light grey, shimmering brown and rich black.

Outstanding faucet and furniture design

The trio at the heart of every kitchen not only includes the sink and

waste collectors but also the faucet. Naber's commitment to achieving a perfect workflow is also demonstrated in the ARMATE® range. The Namor® kitchen faucets made of 304 stainless steel and now featuring a new detergent dispenser in three colours meet the highest demands in terms of stylish design, ease of use and technical features. The new Wasserwerk models "Grace" with their high C-shaped outlet in several attractive colours and colour combinations embody one more impressive statement of elegance, balance and reliability.

For a contemporary living environment, Naber is presenting new chairs, stools and table frames at the area30. The bar table frames are just as appealing guarantees of stability as the X-shaped table frame with a matt black finish. The seating furniture is dominated by swivelling star-shaped frames, which visually enhance a wide range of furnishing styles with comfortable seat shells and, in some cases, with armrests. With their unobtrusive colours, the covers of many models show that recycled materials can be extremely appealing in terms of appearance.

Stylish storage and furnishing

The many important utensils are quickly to hand thanks to the rail system with open storage in the niche. The Lucento system in aluminium with a black finish is visually outstanding and includes shelves of different heights in three widths. It also provides lighting for an individual and stylish setting. The LED lighting integrated into the railing tracks is dimmable and the colour temperature can be continuously varied.

Attractive support elements also contribute to the harmonious overall appearance of the kitchen as a living space. The new additions to Naber's TRADUR® range extend the selection of round and square supporting feet and base levellers equipped with sockets and USB chargers. Together with the consoles, they open up new possibilities for designing areas with counters and kitchen islands.

Excellent lighting and ventilation technology

Technical systems that enhance the well-being of kitchen users will, as usual, be clearly demonstrated at Stand G 21 at the area30. In the field of lighting technology, the new, highly compatible generation of converters is also certain to contribute to more well-being among kitchen buyers. With solutions from Naber, the path to achieving situationally perfect lighting scenarios and smart home lighting is shorter, more straightforward and simpler. The wide selection of compatible LUMICA® LED lights also affords enormous freedom in planning. In the "House of Illumination", among other things, visitors can explore the versatile Easytrack rail system with new pendant lights and spot-lights.

The impressive variety of high-performance COMPAIR® kitchen ventilation technology has been developed by Naber through continuous innovation. At this year's area30, the family-owned company will be showcasing its expertise in areas such as guided recirculation in downdraft extractors. The controlled extraction of cooking fumes, which protects the cabinet body from dirt and mould, will be demonstrated at the trade fair stand. When using a recirculating air system, nothing removes odours and moisture from the cabinet better than the COMPAIR® GREENflow filter system and COMPAIR PRIME flow® air ducts.

WESCO® soloists and systems

The colourful variety of WESCO® multi-containers will be on display again in Löhne. Every single waste container, every bread bin and roll holder, every biscuit tin and storage container is the ultimate expression of individuality. With their perfect harmony of form, colour and function, WESCO®'s durable household products with their exclusive design details are ideal solutions for storage and disposal.

Alongside stylish soloists, WESCO® offers space-saving built-in systems for domestic waste management. The latest innovation – Pullboy Soft Fusion® – provides ample space in the base cabinet for water conditioning equipment.
