Naber integrates water conditioning into waste systems

Multifunctional boiling water taps provide added convenience at the sink. Innovative front pull-out systems from Naber also ensure convenience for waste separation. With Pullboy Soft Fusion® from the WESCO® and Cox® Base Q and Q+, the kitchen accessories experts have developed outstanding combination solutions for the 600-millimetre-wide sink base cabinet. Both product series integrate the technical equipment for water conditioning into a smooth-running waste collector pull-out system.

It saves time and also space on the work surface when boiling or sparkling water flows from the tap. Waste collector systems from Naber's SELECTAkit® range optimise the limited storage space in the cabinet around the water connection, allowing you to keep the waste container close to hand when preparing and cleaning at the sink.

Pullboy Soft Fusion® for faucets from different manufacturers

In the WESCO® Pullboy Soft Fusion® pull-out system, the water conditioning equipment is placed to the left of the waste containers. It remains securely in place when the waste containers are pulled out and when they glide smoothly back into the cabinet. With a system height of 320 millimetres, alongside the 17-litre single-container bin, the two-container version with a total waste volume of 16 litres is also available. The system height of 480 millimetres provides for a single container volume of 29 litres. Lids for the containers are included in the scope of delivery.

Pullboy Soft Fusion® allows you to respond flexibly to each individual situation. With a system depth of just 330 millimetres, the fresh water and waste water technology have sufficient space. The system is robust and durable, guarantees stable front connection and is compatible with

convenience faucets from various manufacturers. It also offers excellent value for money.

COX® front pull-out system for Quooker faucets

Up to two containers can be accommodated in the sturdy and convenient waste systems designed by Naber for Quooker® boiling water faucets. Cox® Base Q+ for Quooker® Combi/Combi+ and Cube integrates the 7-litre water reservoir, while Cox® Base Q for Pro 3 and Cube incorporates the 3-litre water tank. By taking the exact dimensions of the reservoir into account, it was possible to maximise the waste volume. With a system height of 360 millimetres, it holds 20 litres in the single-container versions and 22 litres in the two-container versions.

Cox® Base Q and Q+ feature a practical system cover that can be used as a storage tray for utensils. The technical equipment for water conditioning can be placed either to the right or left of the waste containers. The high-quality pull-out technology and the clever placement of the faucet equipment, including hose and cable management, provide outstanding ease of use. Furthermore, optionally available extension hoses make it possible to set up and maintain the Quooker system in front of the cabinet.
