

Vario energy distributor

Product number: 7011064
Configuration: silver

Configuration options
7011064 | silver

✓ Distributor
✓ Socket element
✓ 2 x earthed plug socket

With 1500 mm mains connection cable. The Vario power distributor controls the interaction of strong consumers with high connection values to a 230 V/16 A safety socket.

Given simultaneous operation of two appliances with high energy consumption (e.g. washing machine and dryer or dishwasher and boiler), during the heating phase of the appliances, the supply line may become overloaded and, as a result, the circuit breaker may be activated.
The Vario power distributor recognises this and switches off one appliance to avoid triggering of the circuit breaker.
For example, if a washing machine is operated in the black socket and a dryer in the white socket, the dryer is switched off briefly during the heating phase of the washing machine. Once the heating process of the washing machine finishes, the dryer is automatically switched back on again. If the white socket is switched on, the red function display is also automatically lit. A 2-pole illuminated rocker switch also makes it possible to disconnect all the connected consumers from the mains so as to avoid potential danger sources. The extended contact protection offers you and your family additional safety.

— disconnection by overload protection at approx. 3400 W
— reconnection at approx. 450 W

Technical data

Article type	Distributor
Height	47 mm
Width	308 mm
Mains voltage	230 V/16 A
Shape	angular
Length of the supply line (primary)	1.500 mm

Version sockets	2 x earthed plug socket
Surge protection	disconnection by overload protection at approx. 3400 W, reconnection at approx. 450 W
Type of socket element	Socket element
Switch type	Rocker switch
Number of sockets (total)	2
Touch protection ("child safety lock")	with increased contact protection
