

MONTEC®

Flex-Frame®

Perfect installation of all connections for kitchen islands

Kitchen islands are popular as attractive eye-catchers in the centre of spacious, high-quality living kitchens. However, there are special challenges "behind the scenes" during planning and installation. If pipes, connections and drains are positioned on the floor on site, installation is awkward and complicated.

The clearly better solution is called **MONTEC® Flex-Frame®**. With this, Naber offers a safe and quick way to fit water connections and all other components intended for installation in the base cabinet.

The basis of **Flex-Frame®** is a mounting frame consisting of two fixing brackets with a sliding middle piece. The fastening via slotted holes allows for continuous adjustment. On-site wall disks for the connections and drains can be firmly and effortlessly fitted. Especially convenient: this perfect and clever installation aid is flexibly adapted to the standard dimensions of kitchen base units.

Cleanly and clearly mounted: cold and hot water, sink drain, surface-mounted socket, connection for drinking water pipe (e.g. for a coffee machine with a fixed water connection or a refrigerator with an ice cube maker).
