Naber presents the built-in sink innovation SILQUA in several variants

Sink pure with striking details

The transitions within the sink are softly rounded, whereas the outer contours are strictly geometric. This aesthetically appealing contrast and further ingenious details characterise the new SILQUA built-in sink collection in the NABER-CONTURA® range. Developed by Naber in collaboration with Hans Winkler Design, Grafenau, this sink range combines minimalist design with practical functionality.

Inspired by flowing water, SILQUA features soft inner radii that reduce the risk of impact damage and provide a pleasant tactile experience. The integrated faucet ledge can be used as a second working surface. Here, a cup, a small bowl and a washing-up sponge can be left to dry after washing up. Thanks to the drainage grooves and rounded edge, water can run off easily.

The positioning of the faucet contributes to the exceptional ease of use. It is mounted in the centre, so your hands are above the sink when you use it. The water drips into the bowl and does not need to be wiped away from the surrounding surfaces. The rotational excenter to the right of the faucet is both practical and elegant. It guarantees easy opening and closing of the basket strainer valve and underlines the purist design of the built-in sink. Overall, the many well-thought-out details also make cleaning the sink itself easier.

Attractive material and colour variants

One of the objectives of this product innovation from Naber was to make the outstanding functionality of the sink available across different price ranges and for a variety of interior styles. SILQUA is therefore available in several material and colour variants and for various

Press release · p. 2 / 2

installation types – all in excellent, durable quality.

For the ceramic versions, kitchen customers can choose between the colour options Nero, Slate, Lava, White Matt and White Gloss. These models can be integrated into the worktop either as surface-mounted or flush-mounted versions, as well as in the fascinating substructure version. The composite sinks are available in the very latest colours: the range of granite colours includes deep black (granite nero ossidiana), shimmering brown (granite terra di agata), light grey (granite grigio tormalina) and bright white (granite bianco howlite).

Alongside a stylish drip mat and an elegant dish drainer, matching cover caps for the basket strainer valve are available as optional accessories for the SIL-QUA collection. For the ceramic sinks, these are available in all five colour variants, for the composite sinks they come in a matt black. With its striking character, every detail of this innovative sink is convincing, both in terms of design and functionality.
