

LUMICA® MEC LED system

Smart Home Lighting 2.0!

LUMICA® MEC LED system

Innovative light management with clear structure and countless options! Flexible, modular system for smart supply and control of LED light.

LUMICA® MEC LED system

Smart lighting control: precisely tailored lighting for kitchens, bathrooms, living rooms, and home offices. From Naber!

Why use a switch when you can operate a light by remote control or smartphone? The advantage of “intelligent lighting” is especially clear when several lights are used – such as in open-plan kitchens: **at the touch of a button or by voice command**, lighting areas are created that offer **optimum illumination** and **personalised bespoke** solutions.

And LUMICA® MEC can do even more! A saved lighting scenario can instantly be replaced by another – from bright work surfaces to atmospheric table lighting or subtle background light. **Variably adjustable light colours** with seamless transition between cool, neutral and warm white light make lighting flexibility a feel-good factor!

The basis for this is state-of-the-art LED technology **with communicating control units** – made possible with LUMICA® MEC. The system works either offline with remote control or – when integrated into the smart home – with a smartphone or voice control. Thanks to the ZigBee 3.0 wireless standard, it is compatible with lights from other manufacturers. The LUMICA® MEC LED system ensures safety, clear connections without cable clutter, simple setup and control right from the start. And immediate flexible adjustment as required. **Authentic smart home lighting 2.0!**

All Naber lights marked with this symbol are equipped with colour-changing LEDs. The lights can be controlled using either the new **LUMICA® MEC LED** or the tried-and-tested **LIC LED system**.

Set the right light colour according to your requirements

Cold white light
particularly suitable for
bright illumination

Neutral white light
creates a more objective,
neutral atmosphere

Warm white light
perceived as cozy,
comfortable and calming

Further information on the LUMICA® MEC LED system can be found in the online magazine

The LUMICA® MEC components

Innovative light control with clear structure and countless options!

LUMICA® MEC from Naber is a flexible, modular system for powering and controlling LED lighting. LUMICA® MEC eliminates cable clutter and complex connections. With the converters and various modules, space-saving and simple solutions can be implemented even for complex lighting control systems. For individual, attractive room lighting!

Converters

Powerful, available in four power levels, and now suitable for 12- and 24-volt function modules at the same time!

Control units

Completely individual: switch lights or groups of lights on and off and (depending on the light) adjust the light colour using a remote control, smart-phone app or voice command.

Lights

Converters

ZigBee functional modules

Control units

Lights

NABER LED lights from the LUMICA® LIC and the LUMICA® MEC range, as well as lights from other manufacturers (provided they are compatible with the ZigBee 3.0 standard).

ZigBee functional modules (12 and 24 volts each)

Optionally available as 1- or 4-channel functional modules. There are also switching modules (for wired sensors) and distribution modules.

Simply plug and combine

Intelligent plug-in system: several modules can be connected to powerful converters in series. LUMICA® MEC can therefore easily be adapted to individual requirements – without annoying tangled cables!

Four power levels for 12 and 24 volts

LUMICA® MEC converters are available in four power levels. The different functional modules are available in 12 and 24 volts. They can be supplied by a single converter (taking the total load into account).

Simple operation

It can be easily controlled via remote control using the ZigBee 3.0 wireless standard or by connecting to the Philips Hue Bridge via a smartphone app or voice command. Everything is set up quickly, securely, and clearly, and above all, it's easy to use!

ZigBee 3.0 standard

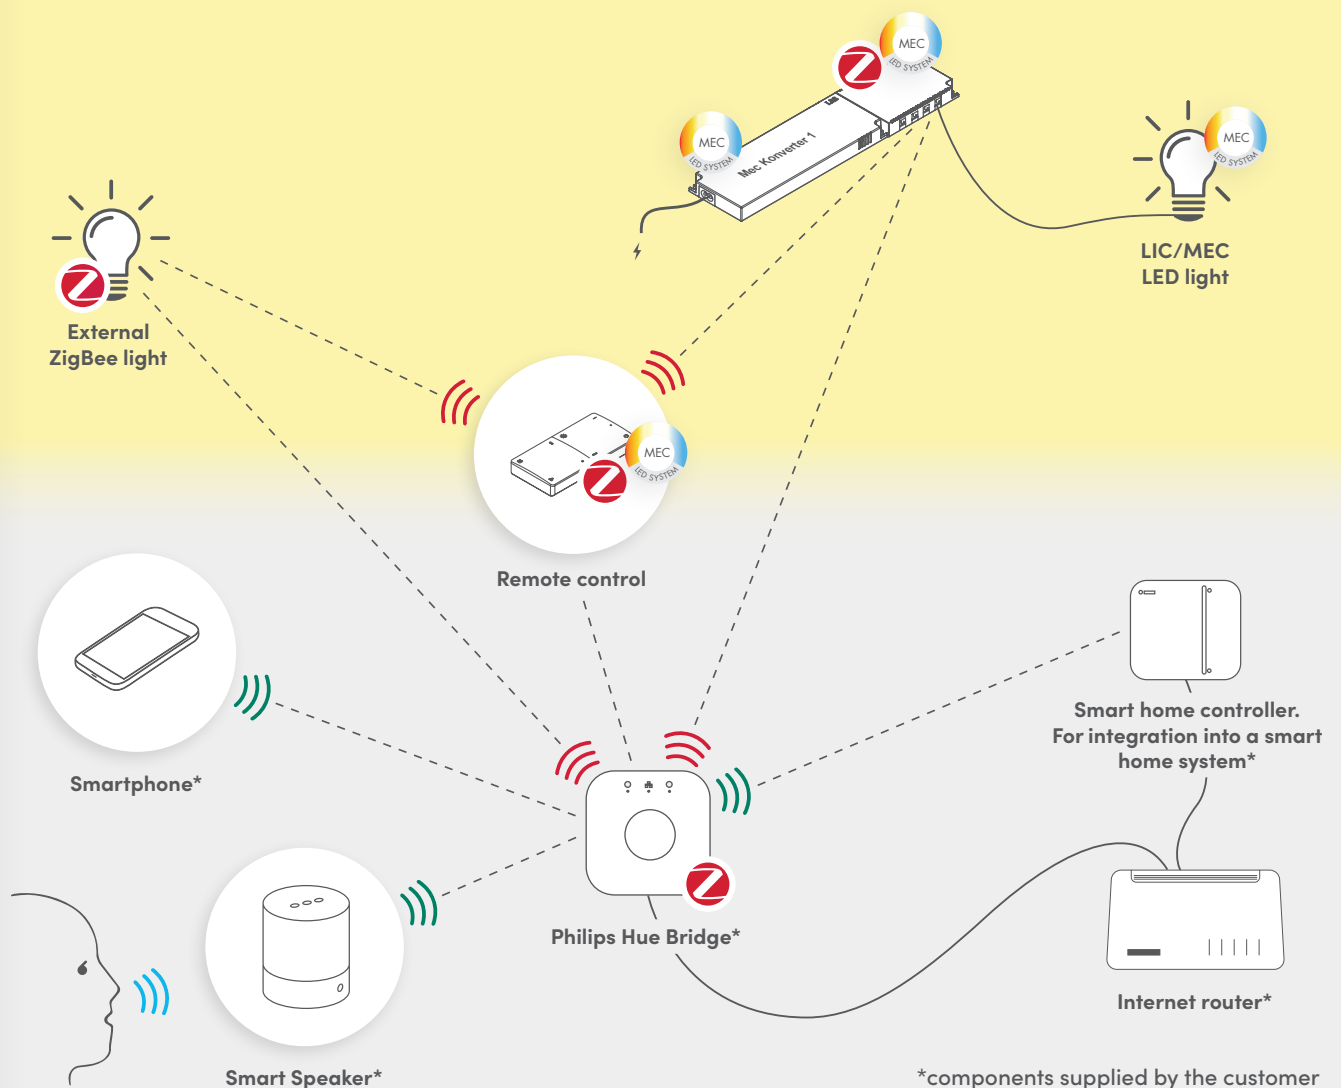

Perfect! LUMICA® MEC makes it easy to combine Naber LED lights from the LUMICA® LIC and LUMICA® MEC range with lights from other manufacturers which are compatible with the latest ZigBee 3.0 wireless standard.

Compatibility and communication

The ZigBee wireless standard (as well as the other common wireless protocols such as Wi-Fi and Bluetooth) is used to set up a smart home network. ZigBee is secure, energy-efficient and – in the current version 3.0 standard – is used, among other things, to transmit control commands to lighting systems. ZigBee thus makes it easier to combine lights and groups of lights to create controllable lighting scenarios for every room.

Naber LUMICA® MEC LED system

The simple registration of lights in the current ZigBee 3.0 standard allows closed and independent offline control of Naber LUMICA® LED lights (LIC/MEC) together with lights from other manufacturers.

Smart home lighting 2.0

By integrating LUMICA® MEC into a ZigBee 3.0 standard wireless network (via a Philips Hue Bridge), Naber LUMICA® LED lights (LIC/MEC) can easily be combined with compatible lights from other manufacturers to form lighting groups.

Installation instructions

Step by step

It only takes a few steps to set up and precisely control one or more lights, which can be grouped together and switched collectively. The control can either be carried out solely via the LUMICA® MEC LED system, or more conveniently via a ZigBee bridge (e.g. Philips Hue Bridge) using a voice command and smart speaker, or with the corresponding smartphone app (see page 5).

Definition of the areas to be illuminated

2 Selection of lights

Select lights and converters
(Note the MEC marking!)

3 Lamp mounting

Installing and connecting the lights

4.1 Operation only with the LUMICA® MEC LED system

The LUMICA® MEC LED system operates independently. Lights are assigned to groups directly via the remote control, with each remote control able to control up to four groups. An **additional remote** control is required for further groups.

4.2 Operation with a ZigBee bridge (e.g. Philips Hue Bridge)

With a ZigBee bridge, comprehensive lighting scenarios can also be conveniently controlled. The set-up consists of the following steps:

1. Download and open the Philips Hue app.
2. Search for new lights. To do this, follow the instructions in the app. The app can directly detect both the remote control and the ZigBee function module as receivers.
3. The remote control and ZigBee function module appear as independent ZigBee addresses and can now be paired with the app using the "Add lights" function.
4. With the paired remote control, the lights can now be grouped (as in 4.1) and transferred into the app.
5. Name the individual lights (or channels) in the app and arrange them as desired.

The control can now be carried out entirely via the app. The remote control is only needed again if configurations **within the LUMICA® MEC LED system** are to be changed.

6. Smartphone, smart speaker, smart home controller:

The control of the lights (or groups of lights) – including the intensity and light colour – can be carried out via the app on a smartphone, simply by voice command through a smart speaker, or via a smart home controller connected to the Internet router.

Video manual with video explanation for the 4-channel LED control.

The LUMICA® MEC LED system at a glance

The LUMICA® MEC LED system has exactly the right components for supplying and controlling perfect LED spatial lighting designs. Versatile and flexible in composition, yet surprisingly easy to configure. With LUMICA® MEC, jumbled connections and confusing control solutions are a thing of the past. The ZigBee 3.0 standard wireless protocol makes LUMICA® MEC super compatible: Naber LED lights (LIC/MEC) can simply be combined and switched with lights from other manufacturers.

Converters

12V 18W 7061400 | 32W 7061401 | 60/72W 7061403 | 24V 120W 7061405

MEC Driver LED converter

Modular power supply and control system for LED lighting, 12 V and 24 V, output 18 to 120 W. Various wireless, distribution, and switching modules can be connected to an LED converter up to its maximum output capacity.

Modules

12V 1-channel 4-channel 7061426 7061428 | 24V 1-channel 4-channel 7061427 7061429 | 12V 7061407 | 24V 7061408 | 12V 7061412 | 24V 7061413

1- or 4-channel wireless/ZigBee module, 12 or 24 V

For connecting up to 4 lights or groups of lights, with control using remote control, smartphone or smart home ZigBee 3.0 network.

Distributor module, 12 or 24 V

Outlets, standard configuration. For connecting up to 8 lights.

Switching module, 12 or 24 V

For switching up to 3 light groups via wired sensors.

Control units

Black
7061430

White
7061431

Remote control

Setting of the colour temperature and dimming with a LUMICA® MEC ZigBee module or with easy integration (ZigBee 3.0) into smart home applications.

7061419

Switches

Switch (on/off) for connection to the LUMICA® MEC switching module.

IR/TK
7061414

Motion detector
7061416

Wired sensors

Infrared and door contact sensors, as well as motion detectors for connection to the LUMICA® MEC switching module.

Accessories

7061409

Connection line

LUMICA® MEC converter connection cable, 100 mm, 12 or 24 volts.

7061244

Distributor 12 V

The 12 V distributor allows connection of up to six LED lights (taking into account the maximum connection load per slot).

7061380

Distributor 24 V

The 24 V distributor allows connection of up to six LED lights (taking into account the maximum connection load per slot).
